

SIMPLE INSTALL INSTRUCTIONS

1. SET FLAGS

There must be **one flag** (or sufficient identifying object) placed **where each plant is to be planted**.

Please note: Figuring out the exact location for a plant to be planted is design work and is not included in a simple install. Our installation crew will not weigh in on or determine placement.

2. PREPARE SITE

The predesignated spot for the plant must be suitable for planting.

If an existing plant or another obstacle is in the designated planting location, its complete removal and the full repair of the site must be completed prior to our team's installation of the new plant. This includes removing all grindings, and/or chips, and adding back any removed soil.

The soil must be tamped and graded to the proper elevation before a new plant can be installed.
